

Esri Technology for Successful INSPIRE Implementations

Roberto Lucchi

Esri

Abstrakt

In Europe INSPIRE is a crucial driver for the development of Spatial Data infrastructures. Thanks to INSPIRE the awareness on the benefits provided by an interoperable and web accessible spatial data sharing platform is rapidly grown and so the expectations.

Esri has addressed all this organically by releasing ArcGIS for INSPIRE, a product specifically engineered to meet INSPIRE requirements, and by making it fully integrated with solutions for content sharing, application development, information products creation and delivery tools for sharing and making these accessible virtually everywhere.
