

# Integrate ArcGIS Utility Network into your Business using Similix AssetBus™

Jesper Vinther Christensen

Similix

---

## Abstrakt

Similix helps utilities building high fidelity network models in Utility Network and has experience from many global projects. The value of implementing UN multiplies when the network model is shared across business processes and systems. Similix has developed configurable software products that enables exactly this.

We will share our experience from recent European go-lives of CIM-based integration from Utility Network to ADMS as well as 2-way integration between Utility Network and ERP/EAM.
